Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Claim Rejections - 35 USC § 101

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 11-13 are rejected under 35 U.S.C. 101 as not falling within one of the four statutory categories of invention. Supreme Court precedent and recent Federal Circuit decisions indicate that a statutory "process" under 35 U.S.C. 101 must (1) be tied to another statutory category (such as a particular apparatus), or (2) transform underlying subject matter (such as an article or material) to a different state or thing. While the instant claim(s) recite a series of steps or acts to be performed, the claim(s) neither transform underlying subject matter nor positively tie to another statutory category that accomplishes the claimed method steps, and therefore do not qualify as a statutory process.

For example, obtaining, selecting and displaying steps as cited in claim 11 of sufficient breadth that it would be reasonably interpreted as a series of steps completely performed mentally, verbally or without a machine. The disclosure has provided no explicit and deliberate definitions of "obtaining", "selecting", or "displaying" to limit the steps to be performed only by the an

apparatus or system, and the claim language itself is sufficiently broad to read on a user manually performing the “obtaining”, “selecting”, and “displaying” steps. For instance, the user manually determines and obtains the printer capability, and manually selects one of the capabilities obtained. The obtained capabilities can be listed and/or printed on print media and display to the users/operators. Claims 12-13 are dependent upon claim 11, therefore, are rejected for the same basis.

Allowable Subject Matter

The following is a statement of reasons for the indication of allowable subject matter:

The cited prior arts of record (CIPA DC-001-2003 and US 20030043204 to Aquilera et al) fail to teach and/or suggest a user interface selector (a) selects a first user interface that cannot control both the first and the second trimming print function, if the determination unit determines that the printer has neither the first nor the second trimming print function, (b) selects a second user interface for controlling the second trimming print function, if the determination unit determines that the printer has the second trimming print function but not the first trimming print function, (c) selects a third user interface for controlling the first trimming print function if the determination unit determines that the printer has the first trimming print function but not the second, and (d) selects a fourth user interface for controlling the first and the second trimming print functions if the determination unit determines that the printer has both the first and the second trimming print functions.
